## Review — Objects in Smalltalk

Add WeChat powcoder

- > *Everything* is an object
  - Things only happen by message passing
  - Variables are dynamically bound
- > Each object is an instance of one class
  - A class defines the structure and the behavior of its instances.
  - Single inheritance
  - A class is an instance of a metaclass
- > Methods are public
  - private methods by convention in “private” protocol
- > Objects have private state
  - Encapsulation boundary is the object

# Assignment Project Exam Help

## Object

Add WeChat powcoder

- > Object is the root of the inheritance tree (well, almost)
  - Defines the common and minimal behavior for all the objects in the system.
  - Comparison of objects:
    - `==, ~~, =, ~=, isNil, notNil`
  - Printing
    - `printString, printOn, aStream, print, printNl`
    - `display, displayNl`
    - `Transcript show:, display:, tab, cr`

# Assignment Project Exam Help

## Identity vs. Equality

Add WeChat powcoder

- > `==` tests Object identity
  - Should never be overridden
- > `=` tests Object value
  - Should normally be overridden
    - *Default implementation is `==`*
  - You should override hash too!

```
'foo', 'bar' = 'foobar'
'foo', 'bar' == 'foobar'
```

```
true
false
```

# Assignment Project Exam Help

## Printing

Add WeChat powcoder

- > Override `printOn:` to give your objects a sensible textual representation

Assignment Project Exam Help

```
Fraction>>printOn: aStream  
aStream nextPut: $/  
numerator printOn: aStream.  
aStream nextPut: $/.  
denominator printOn: aStream.  
aStream nextPut: $) .
```

# Assignment Project Exam Help

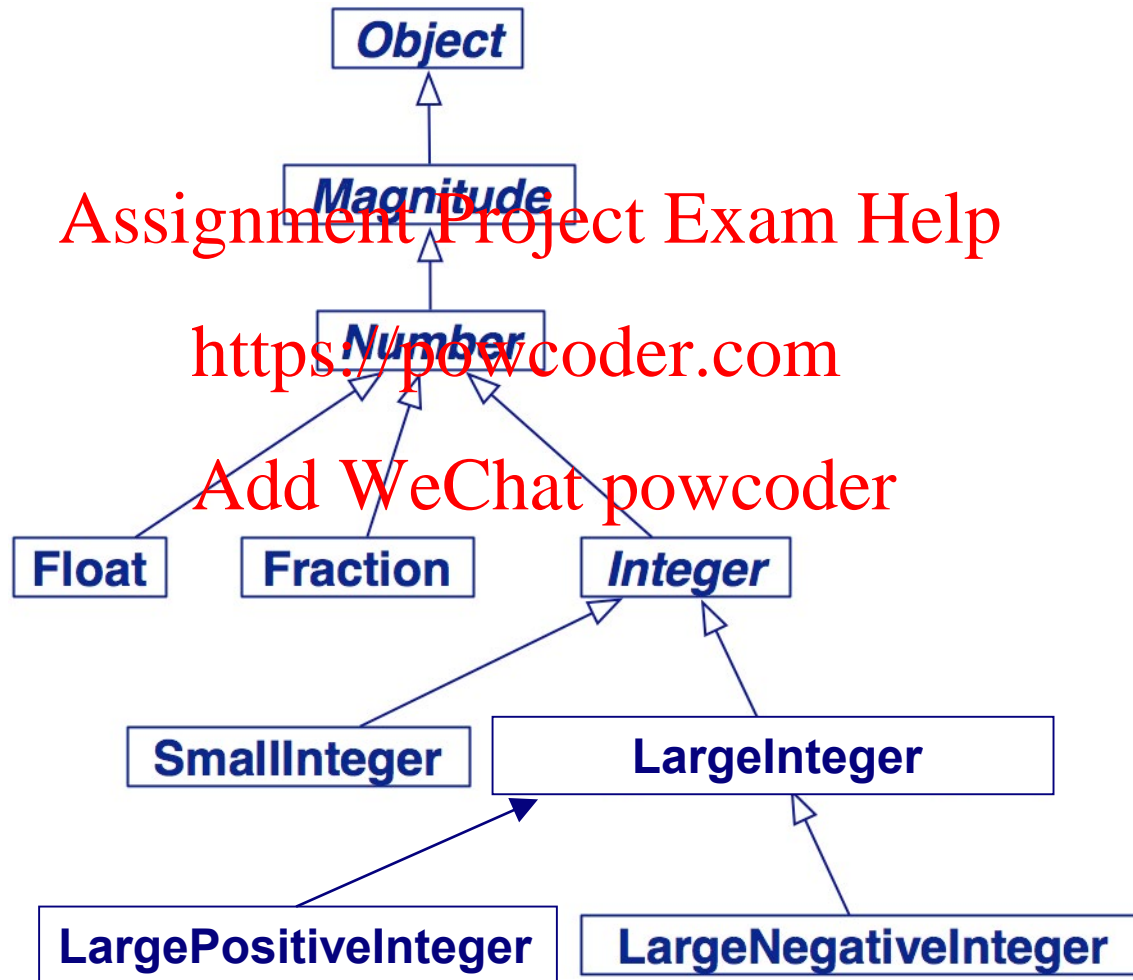

## Object methods to support the programmer

<code>error: aString</code>	Signal an error
<code>doesNotUnderstand: aMessage</code>	Handle unimplemented message
<code>halt, halt: aString, haltIf: condition</code>	Invoke the debugger
<code>subclassResponsibility</code>	The sending method is abstract
<code>shouldNotImplement</code>	Disable an inherited method
<code>deprecated: anExplanationString</code>	Warn that the sending method is deprecated.

# Assignment Project Exam Help

## Numbers

Add WeChat powcoder

# Assignment Project Exam Help

## Abstract methods in Smalltalk

### Add WeChat powcoder

## Assignment Project Exam Help

```
Number>>+ aNumber
```

```
"Answer the sum of the receiver and aNumber."
```

```
self subclassResponsibility
```

# Assignment Project Exam Help

## Abstract methods (part 2)

### Add WeChat powcoder

```
Object>>subclassResponsibility
```

*"This message sets up a framework for the behavior of the class' subclasses. Announce that the subclass should have implemented this message."*

```
self error: 'My subclass should have overridden ',  
thisContext sender selector printString
```

# Assignment Project Exam Help

## Automatic coercion

Add WeChat powcoder

```
1 + 2.3
```

```
1 class
```

```
1 class maxVal class
```

```
(1 class maxVal + 1) class
```

```
(1/3) + (2/3)
```

```
1000 factorial / 999 factorial
```

```
2/3 + 1
```

```
3.3
```

```
SmallInteger
```

```
SmallInteger
```

```
LargePositiveInteger
```

```
1
```

```
1000
```

```
(5/3)
```

*Try various mixed expressions to see how coercion works.*

Assignment Project Exam Help  
Try this in Java!  
Add WeChat powcoder

1000 factorial

## Characters

Add WeChat powcoder

### Assignment Project Exam Help

- > Characters: <https://powcoder.com>

\$a \$B \$\$ \$ \$1

Add WeChat powcoder

- > Unprintable characters:

Character space, Character tab, Character cr

# Strings

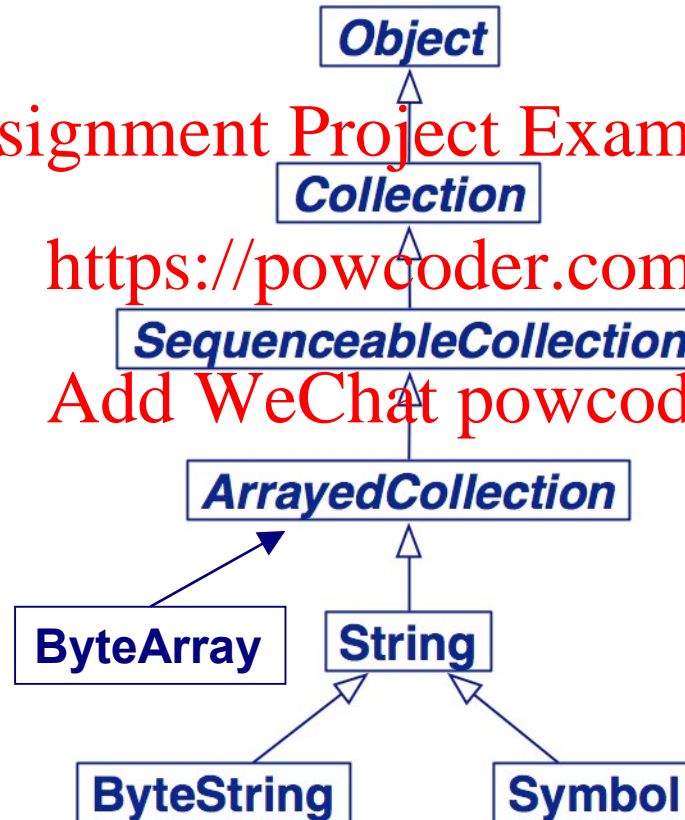

## Assignment Project Exam Help

Add WeChat powcoder

Assignment Project Exam Help

<https://powcoder.com>

Add WeChat powcoder

# Assignment Project Exam Help

## Strings

Add WeChat powcoder

```
#mac asString  
12 printString  
String with: $A  
'can't' at: 4  
'hello', ' ', 'world'
```

```
'mac'  
'12'  
'A'  
$'  
'hello world'
```

- > To introduce a single quote inside a string, just double it.

# Assignment Project Exam Help

## Comments and Tips

Add WeChat powcoder

- > A comment can span several lines.

Assignment Project Exam Help

<https://powcoder.com>

```
"TestRunner.open"
```

Add WeChat powcoder

```
"This is a longer  
comment that spans  
multiple lines"
```

# Assignment Project Exam Help

## Literal Arrays

Add WeChat powcoder

```
#('hello' # (1 2 3))
```

```
#(a b c)
```

Assignment Project Exam Help

<https://powcoder.com>

Add WeChat powcoder

```
#('hello' # (1 2 3))
```

```
#(#a #b #c)
```

# Assignment Project Exam Help

## Arrays and Literal Arrays

Add WeChat powcoder

- > Literal Arrays and Arrays only differ in creation time
  - Literal arrays are known at compile time, Arrays at run-time.

### Assignment Project Exam Help

- > A literal array with two symbols (not an instance of Set)

```
# (Set new)
```

<https://powcoder.com>

```
# (#Set #new)
```

Add WeChat powcoder

- > An array with one element, an instance of Set

```
Array with: (Set new)
```

```
an Array(a Set())
```

# Assignment Project Exam Help

## Dynamic arrays with { }

Add WeChat powcoder

> { ... } is a shortcut for Array new ...

# (5 + 2 . 3 \* 4 )

{ 5 + 2 . 3 \* 4 }

Array with: 5+2 with: 3\*4

**Syntax error**

**# (7 12)**

**# (7 12)**

# Assignment Project Exam Help

## Symbols vs. Strings

Add WeChat powcoder

- > Symbols are used as method selectors and unique keys for dictionaries
  - Symbols are read-only objects, strings are mutable
  - A symbol is unique, strings are not

<pre>'calvin' == 'calvin' 'calvin' == 'calvin' 'cal', 'vin' == 'calvin' 'cal', 'vin' == 'calvin'  #calvin = #calvin #calvin == #calvin #cal, #vin = #calvin #cal, #vin == #calvin #cal, #vin (#cal, #vin) asSymbol == #calvin</pre>	<pre>true true true false  true true true false  'calvin' true</pre>
---	--

!

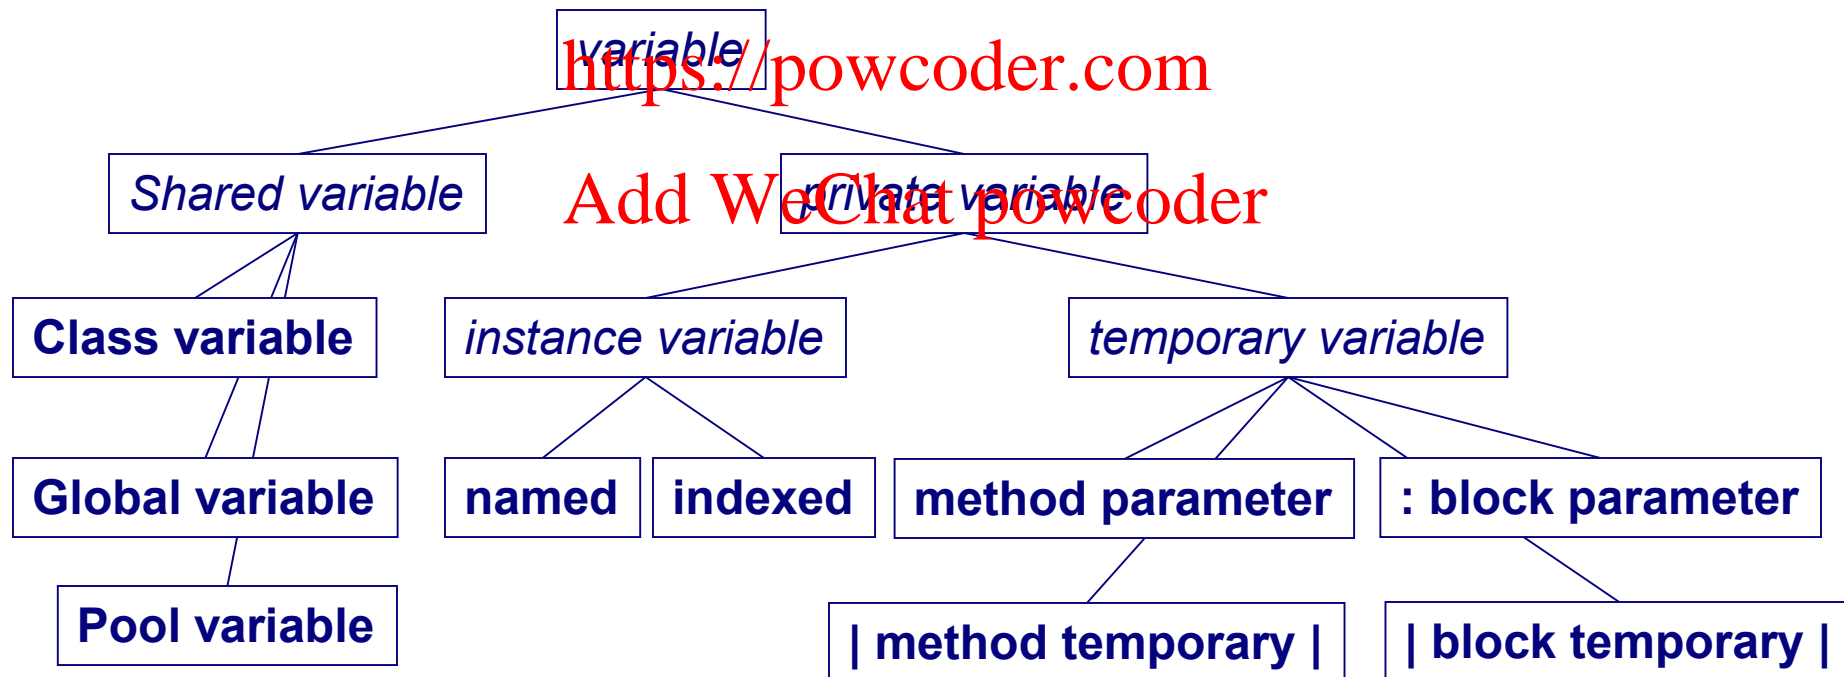

**NB:** Comparing strings is slower than comparing symbols by a factor of 5 to 10. However, converting a string to a symbol is more than 100 times more expensive.

# Assignment Project Exam Help

## Variables

Add WeChat powcoder

- > A variable maintains a reference to an object
  - Dynamically typed
  - Can reference different types of objects
  - Shared (initial uppercase) or local (initial lowercase)

# Assignment Project Exam Help

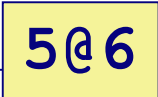

## Assignment

Add WeChat powcoder

- > Assignment binds a name to an object reference
  - Not done by message passing!
  - Method arguments cannot be assigned to!
    - *Use a temporary instead*
  - Different names can point to the same object!
    - *Watch out for unintended side effects*

Add WeChat powcoder

```
|p1 p2|  
p1 := 3@4.  
p2 := p1.  
p1 setX: 5 setY: 6.  
p2
```

The diagram illustrates the state of the program. A box labeled 'p2' is connected by a line to a yellow box containing the text '5@6', indicating that the variable p2 now points to the object 5@6.

# Assignment Project Exam Help

## Global Variables

Add WeChat powcoder

## Assignment Project Exam Help

- > Always Capitalized (convention)  
— Stored in the Smalltalk System Dictionary  
Add WeChat powcoder
- > Avoid them!

# Assignment Project Exam Help

## Global Variables

### Add WeChat powcoder

- > To remove a global variable:

```
Smalltalk removeKey: #MyGlobal
```

- > Some predefined global variables

Smalltalk	Classes & Globals
Undeclared	A PoolDictionary of undeclared variables accessible from the compiler
Transcript	System transcript
ScheduledControllers	Window controllers
Processor	A ProcessScheduler list of all processes

# Assignment Project Exam Help

## Instance Variables

Add WeChat powcoder

## Assignment Project Exam Help

- > Private to an object
  - Visible to instance methods of the defining class and subclasses
  - Has the same lifetime as the object
  - Define accessors (getters and setters) to facilitate initialization
    - *Put accessors in a private category!*

# Assignment Project Exam Help

## Six Pseudo-Variables

### Add WeChat powcoder

- > The following pseudo-variables are hard-wired into the Smalltalk interpreter.

### Assignment Project Exam Help

<code>nil</code>	A reference to the UndefinedObject
<code>true</code>	Singleton instance of the class True
<code>false</code>	Singleton instance of the class False
<code>self</code>	Reference to this object Method lookup starts from object's class
<code>super</code>	Reference to this object (!) Method lookup starts from the superclass
<code>thisContext</code>	Reification of execution context You won't need to understand this variable

# Assignment Project Exam Help

## Pair class (GNU Smalltalk syntax)

Add WeChat powcoder

Object subclass: #Pair.

Pair instanceVariableNames: 'x y'.

Assignment Project Exam Help

Pair extend [  
    getX [ ^x ]  
    getY [ ^y ]  
    setX: a [ x := a ]  
    setY: b [ y := b ]  
].

<https://powcoder.com>

Add WeChat powcoder

# Assignment Project Exam Help

## Alternative GNU Smalltalk syntax

### Add WeChat powcoder

Object subclass: Pair [

| x y |

Assignment Project Exam Help

getX [ ^x ]

<https://powcoder.com>

getY [ ^y ]

Add WeChat powcoder

setX: a [ x := a ]

setY: b [ y := b ]

].

# Assignment Project Exam Help

**Pair client**

Add WeChat powcoder

p := Pair new.

p getX printNL.

p getY printNL.

p setX: 100.

p setY: 'hello'.

p getX printNL.

p getY printNL.

Assignment Project Exam Help

<https://powcoder.com>

Add WeChat powcoder

nil  
nil  
100  
'hello'

# Assignment Project Exam Help

## Triple subclass and client

### Add WeChat powcoder

**Pair** subclass: Triple [  
| z |

Assignment Project Exam Help

getZ [ ^z ]  
setZ: c [ z := c ]  
].

<https://powcoder.com>

Add WeChat powcoder

t := Triple new setX: 3.14159; setY: \$C; setZ: true.  
t getX printNl.  
t getY printNl.  
t getZ printNl.

3.14159  
\$C  
true

# Assignment Project Exam Help

## Meta-programming

Add WeChat powcoder

```
current := Triple.  
[current notNil] while True:  
    [Transcript display: current, tab,  
     display: current selectors size; cr.  
    current := current superclass]
```

Triple	2
Pair	4
Object	127

# Assignment Project Exam Help

## Recap

Add WeChat powcoder

Object subclass: #Pair.

p := Pair new.

...

Pair subclass: #Triple.

t := Triple new.

...

Assignment Project Exam Help

<https://powcoder.com>

Add WeChat powcoder

- > Subsequent diagrams contain two types of links:
  - If x is a subclass of y, and y is the superclass of x

- If x is an instance of y, and y is the owner class of x
